

Electro-industrial project concentration by county

Category

- Clean power infrastructure
- Cleantech supply chain
- Data center infrastructure
- Semiconductor supply chain

Northern Nevada has built a robust lithium battery cluster.

Note: County-level index (0–1, normalized within each source) of clean power infrastructure, cleantech supply chain, semiconductor supply chain, and data center investment since 2022. Clean power and cleantech figures come from the Clean Investment Monitor (2026-Q1), semiconductor figures from the Semiconductor Industry Association (June 2026), and data center figures from BloombergNEF (July 2026). The index standardizes project size across sources measured in both capital expenditure and megawatts.
