

Higher-Educated Adults More Likely to Perceive Rising Election Misinformation

In the weeks around the 2020 U.S. Presidential Election, a past study found that 26.2% of American adults visited at least one “untrustworthy” website (i.e., websites that repeatedly publish false content).

Do you think the percentage of American adults that visited at least one such website in the weeks around the 2024 U.S. Presidential Election was more, less, or the same? (N = 1,000)
