

The United States is set to capture a puny share of the growing new energy export market worldwide

Figures represent historic and projected export values for a selection of new energy technologies, components, and input materials.

Note: Export-history data is current to May 2026. Export-projection data is current to February 2026 and reflects BloombergNEF base-case (Economic Transition Scenario) modeling. Products included are: grid equipment; electric vehicles; zero-carbon electricity generation technology; and critical minerals. ROW = rest of world.
